EDUCATION

Carnegie Mellon University – Master of Science in Software Engineering
Relevant Coursework: Intro to Machine Learning, Data Science, Cloud
Infrastructure and Services

Mountain View, CA
August 2026 – May 2027

Vellore Institute of Technology – Bachelor of Technology (Mechanical Engineering)
GPA: 3.53/4.0

Vellore, India
July 2018 – June 2022

WORK EXPERIENCE

Wealthy – Fintech Asset Management Startup
Senior Software Engineer

Bengaluru, India
March 2026 – August 2026

- Developed a Slack-integrated AI service using specialized subagents with role-based guardrails and a GKE sandbox for algorithm testing, enabling product managers to create GitHub PRs and engineers to diagnose production failures through logs, metrics, and post-deployment checks.
- Designed and deployed a multi-agent support platform with Google ADK and FastMCP, orchestrating API and database tools across multiple domains to reduce ticket escalations to engineers by 70%.
- Engineered a Go-based AI meeting intelligence service using S3 and SQS to ingest and process multimodal recordings from 1,000+ meetings per month, fully automating documentation through AI-generated summaries and action items.
- Delivered a recurring investment service using Airflow, GraphQL and Temporal with user-aware priority scheduling and targeted payment retries, cutting execution time for 30,000 daily orders from 5–6 hours to 30 minutes, supporting over \$5M in monthly investments, and recovering 75% of payment failures.

Software Engineer

January 2023 – February 2026

- Architected and delivered a client asset-transfer platform integrating third-party holdings APIs, automated consent-form generation, and SFTP transaction feeds with Cloud Run fallback jobs and S3 file storage, enabling over \$146M in asset transfers within six months.
- Automated daily transaction reporting for 30 asset managers using Celery and Redis caching, generating files for ~50,000 transactions in 10 minutes with on-demand regeneration for failed jobs.
- Implemented a Django-based instant first-investment flow, integrating third-party payment APIs and using automated failure recovery and distributed locking to prevent duplicate transactions; enabled \$500K in investments within two months.

Myntra (Walmart Group)
Software Engineering Intern

Bengaluru, India
January 2022 – June 2022

- Developed a Python merchandise-allocation system using historical click-through rates and the Google Sheets API, replacing a formula-driven manual workflow and reducing end-to-end allocation time by 66%.

PROJECTS

Fleetline – Control Plane for AI Agents | [Github](#)

- Created a Go-based control plane for AI agent registration, directed task delegation, network allowlists, scheduled jobs, and live fleet monitoring through a web dashboard.
- Implemented heartbeat-based failure detection, timezone-aware scheduling, role-based permissions, and live SSE and Prometheus telemetry for agent health and activity.

StudyAI – Automated Study Material Generator | [Website](#)

- Developed a Dockerized FastAPI application that orchestrates specialized AI agents to transform text and PDF uploads into Pydantic-validated flashcards and quizzes.

TECHNICAL SKILLS

Languages: Python, Go, JavaScript, TypeScript

Frameworks: Django, FastAPI, Gin, React, GraphQL, LangChain, LangGraph, Google ADK, FastMCP

Cloud & Infrastructure: AWS, GCP, Docker, Kubernetes, Prometheus

Databases & Workflows: PostgreSQL, MySQL, MongoDB, Redis, Celery, Temporal, Airflow
